Python Developer | Generative AI | Docker

- Python Engineer with 1+ year of experience in automation engineering and backend development. Skilled in Python, REST APIs, Docker, Linux, and CI/CD pipelines, with hands-on experience building scalable automation frameworks and improving system reliability. Strong understanding of software engineering principles, object-oriented programming, and performance optimization.
- Passionate about Artificial Intelligence and Machine Learning, currently exploring Python-based AI applications, data analysis, and intelligent automation solutions. Interested in leveraging AI technologies to build innovative and efficient software products.

WORK EXPERIENCE

DURU Corporation Python Automation Engineer

05/2025 - Present

- Designed and maintained scalable Python-based automation frameworks for functional and regression testing.
- Converted 100+ manual test cases into automation, significantly improving regression coverage.
- Developed reusable utilities using OOP principles to improve maintainability and reduce code duplication.
- Implemented structured logging and exception handling mechanisms for efficient debugging.
- Integrated automation suites into GitLab CI/CD pipelines with branch-based and scheduled execution.
- Built and maintained Docker-based execution environments for consistent local and CI execution.
- Implemented Docker-in-Docker (DIND) solutions to support parallel and long-running automation jobs.
- Analyzed execution logs and resolved pipeline failures to improve delivery reliability.
- Reduced automation execution time by 25–30% through framework optimization and code refactoring.
- Improved execution stability by reducing flaky test failures through enhanced validation logic.
- Conducted root cause analysis for recurring issues and collaborated with development teams during release cycles.
- Contributed to higher build quality and system stability through continuous testing improvements.

EDUCATION

B.Tech – Information Technology

Sri Venkateswara College of Engineering (GPA: 80%)

Tirupati (06/2020 - 05/2024)

Intermediate (MPC)

Sri Chaitanya College (GPA: 89%)

Kurnool (06/2018 - 05/2020)

Class X (CBSE)

St. Joseph Public School (GPA: 77%)

Anantapur (06/2017 - 04/2018)

CERTIFICATIONS

JavaScript Certification

01/2023

Udemy

SQL Certification

HackerRank

AWARDS & SCHOLARSHIPS

5-Star Rating in Data Structures and Algorithms using python and javascript

HackerRank

PROJECTS

Tourism Discovery Platform

- Developed a tourism platform that displays destination information, images, and nearby attractions.
- Implemented web scraping using Puppeteer and Cheerio to collect travel-related information.
- Built REST APIs to serve destination and location data efficiently.
- Deployed frontend and backend services using modern deployment platforms.

SKILLS

Programming Languages: JavaScript, Python, SQL

Artificial Intelligence & Data: Artificial Intelligence Fundamentals, Data Analysis using Python, Machine Learning Fundamentals, NumPy, Pandas

Backend Development: React.js, Express.js, Node.js, REST APIs

Automation & Testing: Automation Framework Design, Regression Testing, REST API Testing, Test Case Automation

DevOps & Tools: Docker, Docker- in- Docker (DIND), Git, GitLab CI/ CD, Linux

Databases: MongoDB, MySQL

Software Engineering: Debugging & Root Cause Analysis, Object- Oriented Programming (OOP), Performance Optimization

Soft Skills: Communication, Critical Thinking, Problem Solving, Teamwork
